EVION JIMERSON

Fayetteville, Arkansas | evionjimerson@gmail.com | github.com/evionjimerson-crypt | linkedin.com/in/evionjimerson

PROFESSIONAL SUMMARY

Computer Science senior and Mathematics minor building object-oriented Java applications and collaborating on PostgreSQL-backed full-stack systems. Current capstone work focuses on clinical research, validation planning, responsible data handling, and quality criteria for a phone-based eye-movement assessment concept.

EDUCATION

University of Arkansas | Fayetteville, Arkansas *Expected May 2027*
Bachelor of Science in Computer Science | Minor in Mathematics

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML/CSS
Data & Systems: PostgreSQL, Git, MVC Architecture, Object-Oriented Design, Linux/OS Foundations
Focus Areas: Software Engineering, Validation Planning, Information Security, Data Handling & Privacy

EXPERIENCE

NVIDIA Ignite | Technical Career Development Program Participant *Summer 2025*

- Collaborated in small teams alongside NVIDIA engineers and fellow participants to solve structured technical problems and communicate solution approaches.
- Presented technical concepts to technical and nontechnical audiences, strengthening clear communication across different levels of technical familiarity.
- Engaged directly with NVIDIA engineers and mentors, gaining firsthand insight into technical collaboration, engineering career paths, and AI computing.

Walgreens | Customer Service Associate / Cashier *Summer 2026*

- Served a high volume of customers, handled transactions accurately, and remained calm and professional in a fast-paced environment.
- Earned an offer to move into a management role before returning to school, reflecting strong work ethic and communication.

PROJECTS

Smartphone Eye Tracking for Concussion Research | Senior Capstone *In progress*

- Work with a biomedical sponsor on a phone-based eye-movement assessment concept, supporting clinical research and validation planning.
- Address consent and privacy workflows, pilot data collection protocols, responsible data handling, and quality-control criteria for unusable sessions.
- Support input-validation protocols and structured session-quality criteria around camera quality, ambient lighting, and incomplete recordings.

Full-Stack Laser Tag System | Four-person team project *Completed*

- Collaborated on a laser tag software system backed by PostgreSQL, connecting application logic with persistent relational data.
- Coordinated schema integration, data queries, and team Git workflows across the project.
- Connected application state and game logic to a relational database so player records and match data persist across sessions.

2D Game and Custom Map Editor | Java course project *Completed*

- Built a Java game and custom map editor using Model-View-Controller architecture and object-oriented design.
- Extended the engine with bounding-box collision behavior and polymorphic game objects across iterative assignments.
- Separated world state and collision rules, rendering, and player and map-editing input across Model, View, and Controller responsibilities.

LEADERSHIP & OPERATIONS

President Assistant

- Support organizational coordination, scheduling, and team communication alongside computer science studies.

SELECTED COMPLETED COURSEWORK

Operating Systems | Database Management Systems | Artificial Intelligence | Information Security | Software Engineering | Programming Paradigms | Discrete Mathematics | Engineering Probability & Statistics
